

LISTING OF CLAIMS

1 Claim 1. (original) An apparatus, comprising:

2 a) a micro machined optical element; and

3 b) a magnetic sensor disposed on the micro machined optical element.

1 Claim 2. (original) The apparatus of claim 1 wherein the magnetic sensor senses a
2 magnetic field that is used to actuate the micro machined optical element.

1 Claim 3. (original) The apparatus of claim 1 wherein the micro machined optical element
2 includes a moveable portion and at least one magnetic sensor disposed on the moveable
3 portion.

1 Claim 4. (original) The apparatus of claim 3 wherein the at least one magnetic sensor
2 includes a sensor selected from the group consisting of , magneto resistive sensors, giant
3 magnetoresistance sensors, colossal magnetoresistance sensors, anisotropic
4 magnetoresistance sensors, magnetic tunnel junction devices, Hall effect sensors, flux
5 sensing coils, magnetostriction sensors and magneto optic sensors.

1 Claim 5. (original) The apparatus of claim 3 wherein the micro machined optical element
2 includes a fixed portion and at least one sensor further includes one or more magnetic
3 sensors disposed on the fixed portion.

1 Claim 6. (original) The apparatus of claim 5 wherein the magnetic sensor disposed on the
2 fixed portion is disposed on a sidewall of the fixed portion.

1 Claim 7. (original) The method of claim 5 wherein the fixed portion includes a base and the
2 magnetic sensor that is disposed on the fixed portion is disposed on the base.

1 Claim 8. (original) The apparatus of claim 5 wherein the fixed portion includes a top chip
2 and the sensor is disposed on the top chip.

1 Claim 9. (original) The apparatus of claim 5 wherein the sensor that is disposed on the
2 movable portion and the sensor that is disposed on the fixed portion are electrically
3 coupled in a bridge circuit.

1 Claim 10. (original) The apparatus of claim 9 wherein the bridge circuit is a Wheatstone
2 bridge circuit.

1 Claim 11. (original) The apparatus of claim 1 wherein the magnetic sensor senses a sense
2 magnetic field that is separate from a magnetic field that actuates the micro machined
3 optical element.

1 Claim 12. (currently amended) The apparatus of claim 11, ~~wherein~~ further comprising a
2 magnetic structure disposed on the micro machined optical element, wherein the
3 magnetic structure creates the sense magnetic field or changes the magnitude or direction
4 of the sense magnetic field.

1 Claim 13. (original) The apparatus of claim 12, wherein the at least one magnetic sensor is
2 selected from the group consisting of , magneto resistive sensors, giant magnetoresistance
3 sensors, colossal magnetoresistance sensors, anisotropic magnetoresistance sensors,
4 magnetic tunnel junction devices, Hall effect sensors, flux sensing coils,
5 magnetostriction sensors and magneto optic sensors.

1 Claim 14. (original) The apparatus of claim 12 wherein the at least one magnetic sensor
2 includes two or more magnetic sensors.

1 Claim 15. (original) The apparatus of claim 14 wherein the two or more sensors are coupled
2 together in a bridge circuit.

1 Claim 16. (original) The apparatus of claim 15 wherein the bridge circuit is a Wheatstone
2 bridge circuit.

1 Claim 17. (original) The apparatus of claim 12 wherein the micro machined optical element
2 includes a moveable portion wherein the moveable portion is moveable with respect to an
3 axis.

1 Claim 18. (original) The apparatus of claim 17 wherein the magnetic material is disposed
2 substantially parallel to the axis.

1 Claim 19. (original) The apparatus of claim 18 wherein the at least one sensor includes a
2 magnetoresistive sensor;

3 wherein the magnetoresistive sensor has a "C" shape having a gap;

4 wherein, in at least one position of the moveable element, the magnetic material is
5 disposed within the gap.

1 Claim 20. (original) The apparatus of claim 17 wherein the magnetic material is disposed
2 substantially perpendicular to the axis.

1 Claim 21. (currently amended) The apparatus of claim 20 wherein the at least one sensor
2 includes a magnetoresistive sensor;

3 wherein the magnetoresistive sensor has a "C" shape having a gap [[:]].

1 Claim 22. (original) The apparatus of claim 21 wherein, in at least one position of the
2 moveable element, the magnetic material is disposed within the gap.

1 Claim 23. (original) The apparatus of claim 12 wherein the at least one magnetic sensor
2 includes a magnetoresistive sensor characterized by a serpentine shape.

1 Claim 24. (withdrawn) The apparatus of claim 1, further comprising:

2 means for measuring a temperature; and

3 means for compensating for a change in the property of the at least one magnetic
4 sensor with temperature.

1 Claim 25. (withdrawn) The apparatus of claim 24, wherein the compensating means
2 includes means for determining a relationship between the property of the magnetic
3 sensor and the measured temperature.

1 Claim 26. (withdrawn) The apparatus of claim 24, wherein the compensating means
2 includes means for regulating the temperature to maintain the temperature within a
3 desired range.
